

3. Alert Triage Practice

Objective

Analyze alerts, identify false positives, and validate IOCs.

Tools Used

- Wazuh
- VirusTotal
- AlienVault OTX

Task 1 – Triage Simulation

Incident Details

Field	Value
Monitoring Tool	Wazuh
Hostname	kali
Detection Date	May 13, 2026
Event Type	SSH Authentication Failures
Total Alerts	5
Highest Severity	Level 10
Status	Open

Field	Value
Log Source	SSHD / PAM Authentication Logs

Analysis Steps

- Open Wazuh dashboard.
- Review SSH authentication logs.
- Identify repeated failed login attempts.
- Verify source IP reputation.
- Escalate if attack is confirmed.

Triage_Table:

Alert ID	Description	Source	Priority	Status
5610	SSH Authentication Failed	10.0.2.15	Medium	Open

AlienVault OTX

Objective

The objective of this investigation was to validate the suspicious IP address associated with repeated SSH authentication failures using AlienVault OTX threat intelligence services.

Investigation Steps

1. Logged into AlienVault OTX platform.
2. Searched the source IP address:

10.0.2.15

No results found for "10.0.2.15"

Threat Intelligence Findings

Parameter	Observation
Searched IP Address	10.0.2.15
Search Results	No results found
Pulses Detected	0
Indicators Found	0
Malware Associations	None
Threat Intelligence Matches	Not Detected
Risk Assessment	Low

Threat Intelligence Validation:

The Wazuh dashboard detected multiple SSH authentication failure attempts from IP address 10.0.2.15. The alert was investigated using AlienVault OTX for threat intelligence validation. No malicious reputation or indicators were identified because the IP belongs to a private lab environment. The activity was intentionally generated and classified as a false positive.
